Education

B.Tech in Computer Science and Engineering

SRKR Engineering College, Andhra Pradesh

2023 – 2027

CGPA: **9.0 / 10**

Technical Skills

Programming Languages:	Java, C, JavaScript, SQL
Backend:	Spring Boot, Spring Security, Spring Data JPA, REST APIs, JWT Authentication, WebSockets
Frontend:	React.js, HTML5, CSS3, JavaScript
Databases:	MySQL
DevOps & Cloud:	Docker, GitHub Actions, Jenkins, AWS (ECS Fargate, ECR, EC2, IAM, ALB)
Tools:	Git, GitHub, IntelliJ IDEA, VS Code
Core CS:	DSA, OOP, DBMS, Operating Systems, Computer Networks

Projects

TunnelFlow [Java](#), [Spring Boot](#), [Maven](#), [WebSockets](#), [Networking](#) [GitHub](#)

- Building a secure tunneling platform similar to ngrok that allows developers to expose locally running applications to the internet through a centralized relay server.
- Designed a custom messaging protocol and modular client-server architecture, separating the project into Protocol, Client, and Server modules using a multi-module Maven structure for maintainability and code reuse.
- Designed an extensible message-processing framework using a handler registry, allowing new protocol message types to be added without modifying existing dispatch logic.

Secure Notes Application [Spring Boot](#), [Spring Security](#), [JWT](#), [React](#), [MySQL](#) [GitHub](#)

- Developed a full-stack notes management application with React and Spring Boot, allowing authenticated users to create, update, retrieve, and manage personal notes through REST APIs.
- Secured the application using Spring Security and JWT-based authentication, implementing stateless authorization for protected endpoints.
- Designed the backend using a layered architecture (Controller, Service, Repository) with Spring Data JPA and Hibernate, including features such as soft delete and clean API design.

Wander — Cloud Deployment & CI/CD Pipeline [AWS ECS](#), [Docker](#), [GitHub Actions](#), [Amazon ECR](#), [ALB](#) [GitHub](#)

- Designed and deployed containerized frontend and backend services on AWS ECS Fargate, exposing them through an Application Load Balancer with path-based routing.
- Built an automated CI/CD pipeline using GitHub Actions that builds Docker images, pushes them to Amazon ECR, and deploys updated task definitions to ECS whenever code is pushed to GitHub.
- Configured CloudWatch logging, IAM roles, health checks, and environment variables to support reliable deployments and simplify application monitoring.

Achievements

- Solved **250+** problems across LeetCode, HackerRank and GFG
- NPTEL — Programming in Java: Scored **75%**, ranked in the **Top 5%** of all participants nationwide.

Extra-Curricular Activities

Technical Fests & Events — SRKR Engineering College

- Participated in AC Event, Skill Up, ML Explore, and Newbies, gaining exposure to emerging technologies and industry trends.

Hackathon Participation — SRKR Engineering College

- **VedicVision Hackathon — Yoga Routine Generator:** Participated as part of a development team and built a Yoga Routine Generator to create personalized yoga routines based on user inputs and preferences.
